PLANNED PREVENTATIVE MAINTENANCE

REDS provide Planned Preventative Maintenance (PPM) tasks for fuel tanks and associated assets. We aim to minimise downtime and reduce overall maintenance costs by implementing a plan for remedial action that keeps your site running smoothly.

Our CompEx certified engineers provide mechanical and electrical investigations tailored to your specific needs, ensuring your assets always remain compliant.

We work with the SFG 20 guidelines to ensure that inspections are carried out as per their recommended schedule. Inspections range from visual checks to more complex mechanical maintenance.

Where possible, our in-house REDS engineers handle remedial actions, creating an efficient process from the initial report to the final solution.
