

Decommissioning and Installation

Services
we offer

REDS

REDS went above and beyond throughout the project. They understood the sites' access difficulties and offered solutions to the problems faced.

A helpful, knowledgeable, and proactive team.

LEAD PROJECT MANAGER
SKANSKA

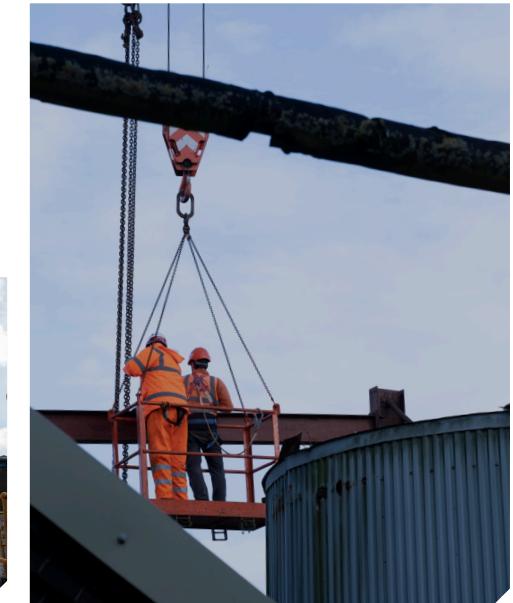

Decommissioning and Installation

Fuel storage tanks are an ongoing part of the industrial landscape, but as business requirements change and tanks reach the end of their usable life, they can become a problem.

Whether the plan is to replace the tanks with new ones or to use the space for an alternative purpose, you will need to ensure that the old tanks are cleaned and disposed of in a safe and compliant fashion, that the area they are sited in has been checked for the presence of contaminants, and that appropriate monitoring or remediation plans have been implemented.

REDS Group's Decommissioning Team has more than 30 years of site and project management experience. They have the expertise and capability to decommission underground and above-ground storage tanks of all sizes while maintaining a zero-loss time incident record.

Together with our in-house Environmental Consultancy and Civil Engineering services, REDS can deliver an end-to-end bespoke service, including remediation of contaminated land.

DECOMMISSIONING AND INSTALLATION SERVICES

Above-ground and underground storage tank emptying, cleaning and decommissioning

Pipework and associated equipment decommissioning

Replacement of underground fuel storage tanks and cradles

Ground remediation, excavation and reinstatement

Remediation system design, removal and installation

Environmental consultancy services and risk assessments
