

Surface Preparation

Services
we offer

REDS

A full-page background image showing a worker in a brown protective suit and helmet, holding a spray gun, working on a large, dark, cylindrical industrial component. The scene is dimly lit with a strong light source from the right, creating a hazy, atmospheric effect. The worker is positioned on the right side of the frame, facing left towards the large pipe. The pipe has some lighter, possibly sprayed, areas on its surface.

Leaders in environmental risk management

The team efficiently prepared some of our plant for respraying, they did a great job. Their service was both friendly and professional.

Environmental consultancy

Tank decommissioning and installation

Fuel and power management

Construction services

Demolition

Planned Preventative Maintenance (PPM)

CompEx electrical and EV charging installation

Soil and groundwater remediation

Emergency incident response

Surface Preparation

SANDBLASTING

Offering professional and high-quality mobile blast cleaning services across the UK. From preparing fuel tanks and bunds for lining to the complete refurbishment of structures that have suffered from age or environmental deterioration, or require remedial cleaning from smoke, chemical, or fire damage.

REDS blast team will ensure that the right media, blast process, and safe working systems are used on your project.

BUND LINING AND REPAIRS

From spot repairs to complete relining, rendering, or repurposing, REDS team will work with you to ensure the correct products are utilised in your leak protection systems.

TANK LINING AND REPAIRS

Our fully confined space trained teams can enter your tank after cleaning and inspection to line it, thereby extending the service life of your asset. Lining products are selected based on your specific requirements and tested and recorded throughout the application process.

Cold welding repairs can be conducted in DSEAR environments where 'hot works' are not allowed. Utilising modern polymers and the relevant metal, repairs can be completed swiftly, bringing the asset back into service in a short period.

THERMAL SPRAYING

A service that perfectly complements the sandblasting, thermal spraying allows you to apply a metal coating - on par with galvanising - to existing in situ metal (subject to survey). This can extend the exposed life of metalwork by up to 20 years, longer if combined with a commercial paint system.

COMMERCIAL PAINTING

REDS offer commercial painting services for on-site work, with a variety of application methods tailored to the environment in which we are working.

The quality of work undertaken in preparing the items for painting was exceptional. Extremely helpful staff throughout the process.
