

# REDS

## Incident Response

We provide emergency spill response, clean-up and environmental services across multiple sectors, including government, commercial, industrial, utilities, insurance, and private estates. We prioritise rapid, effective action to help clients mitigate environmental damage and avoid regulatory prosecution.

### Respond ➤

Our experienced specialists mobilise quickly to contain, control and clean up spills, minimising environmental impact and disruption. We act decisively on site, using proven methods to protect people, assets and the surrounding environment.

### Report ➤

We provide rapid support to ensure spills are reported correctly and in line with regulatory requirements. Our team helps manage notifications to the relevant authorities, reducing risk and uncertainty during a critical incident.

### Remedy ■

We investigate the root cause of the incident and identify weaknesses in systems and procedures. By implementing practical improvements, we reduce the risk of spills happening again.

## End-to-end response, in-house

From hydrocarbons and fuels to wider commercial and industrial products, our spill response engineers are ready to mobilise immediately. Operating fully equipped Regional Response Vehicles, we deliver a rapid, emergency response anywhere in the UK.

Our team has the expertise, resources and operational experience to manage incidents of any scale, from small domestic losses to major industrial spills involving hazardous or polluting substances.

Supported by our in-house Environmental Consultants, we provide detailed spill and incident reporting, environmental risk assessments, intrusive ground investigations, remediation system development and installation, sampling and monitoring, and conceptual modelling. This ensures REDS delivers complete support following an unexpected loss of hazardous materials to the environment.

All works are carried out in accordance with relevant UK environmental legislation and regulatory guidance, ensuring compliance with the Environment Agency, and local authority.

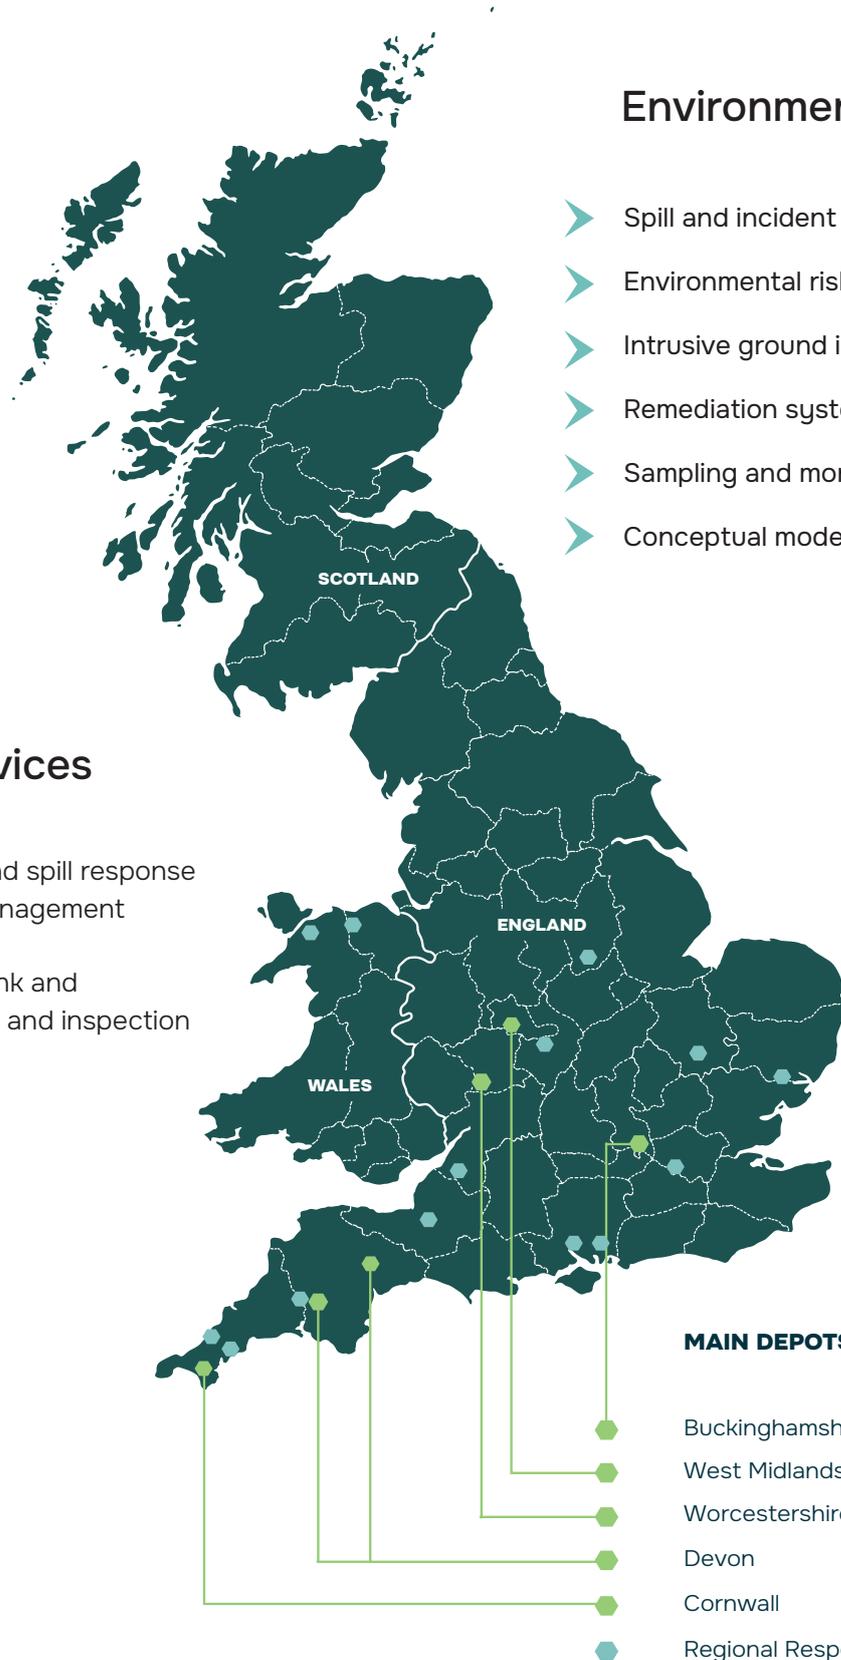

# Nationwide coverage

## Environmental services

- ▶ Spill and incident reporting
- ▶ Environmental risk assessments
- ▶ Intrusive ground investigations
- ▶ Remediation system development
- ▶ Sampling and monitoring
- ▶ Conceptual modelling

## Response services

- ▶ Emergency incident and spill response  
Emergency project management
- ▶ Emergency storage tank and  
pipework maintenance and inspection
- ▶ Emergency Hazardous  
Materials response
- ▶ Hazardous waste  
transfers and disposal
- ▶ Spill equipment and  
remediation systems

### MAIN DEPOTS
